How English-Language Learners Are Putting Schools to the Test

A Special Supplement to Education Week's QUALITY COUNTS 2009

With Support From the Pew Center on the States
About this Report

The 13th annual edition of Education Week’s Quality Counts continues to track state policies across key areas of education and maintains the cradle-to-career framework launched in 2007. With English-language learners as its special focus, Quality Counts 2009 for the first time details state policies to support this diverse group of students. This year’s installment also provides updated 50-state information on policies and conditions in three of the areas monitored by the report on an ongoing basis: the Chance-for-Success Index, transitions and alignment policies, and school finance. Most of the indicators that appear in Quality Counts are based on original analyses and state-survey data from the EPE Research Center. The report also supplements those data with information published by other organizations.

In past years, the print edition of Quality Counts has provided an annual update on state policy initiatives in several key areas and has also used original data analyses to track state educational progress and performance in three other areas. This year, Quality Counts moves to a modular research design in which the EPE Research Center will survey the states about policy issues on an every-other-year rotation. This approach is intended to lessen the burden on state respondents while still providing timely information on key educational policy developments.

In order to provide a comprehensive perspective on state policy and performance, the 2009 State Highlights Reports integrate findings across two years of indicators reported in the 2008 and 2009 editions of Quality Counts. States receive an overall letter grade spanning all six categories that constitute Quality Counts’ analytic framework: Chance for Success; transitions and alignment; school finance; K-12 achievement; standards, assessments, and accountability; and the teaching profession.

Quality Counts 2009 includes a special in-depth examination of the condition of English-language learners in the nation’s schools. As is customary, indicators related to the issue’s special research and journalistic focus are not graded.

Overall findings from Quality Counts show that some states perform consistently well or poorly across the full range of graded categories. However, a closer examination of the rankings reveals that most states post a strong showing in at least one area. This suggests that while broad evaluations of state performance can be useful, a more thorough reading of the results presented in this State Highlights Report will provide a more nuanced perspective on the educational condition of the nation and of individual states.

About Editorial Projects in Education

Editorial Projects in Education (EPE) is a nonprofit, tax-exempt organization based in Bethesda, Md. Its primary mission is to help raise the level of awareness and understanding among professionals and the public of important issues in American education. EPE covers local, state, national, and international news and issues from preschool through the 12th grade. Editorial Projects in Education Inc. publishes Education Week, America’s newspaper of record for precollegiate education, Teacher Magazine, edweek.org, and the Top School Jobs employment resource. It also produces periodic special reports on issues ranging from technology to textbooks, as well as books of special interest to educators.

The EPE Research Center conducts annual policy surveys, collects data, and performs analyses that appear in the Quality Counts, Technology Counts, and Diplomas Count annual reports. The center also produces independent research reports and contributes original data and analysis to special coverage in Education Week, Teacher Magazine, and edweek.org.
## OVERALL GRADE

A state’s overall grade is the average of the scores for the six graded categories.

## A Growing Population

Nationwide enrollments of English-language learners increased by 57 percent between 1995 and 2005. Public K-12 schools educated a total of 5.1 million ELL students in the 2005-06 school year.

In 20 states, the size of the ELL population has at least doubled over this time period, with the greatest percentage increases in Arkansas and South Carolina. However, the numbers of English-language learners declined in nine states.

---

**ELLs Lag Behind**

English-language learners fall far behind their peers on assessments of academic achievement. Large disparities are found for both mathematics and reading on tests developed by both the states and the U.S. Department of Education. Those gaps range from 24 to 32 percentage points, depending on the subject and whether state or national tests are considered. However, proficiency levels for ELL and non-ELL students alike are much higher on state assessments than on the National Assessment of Educational Progress.

The Chance-for-Success Index

To better understand the part that education plays over a lifetime, the Editorial Projects in Education Research Center has developed the Chance-for-Success Index. Based on an original state-by-state analysis, this index combines information from 13 indicators that span an individual’s life from cradle to career. The Chance-for-Success framework allows states to identify strong and weak links in their residents’ educational life course – their typical trajectory from childhood through adulthood. More importantly, the index also provides information that could be used to target the efforts of public education systems in ways that better serve students of all ages.

**GRADE**

D+ 50 C+
The **Chance-for-Success Index** captures the importance of education in a person’s lifetime from cradle to career. Its 13 individual indicators span a variety of factors, including preparation in early childhood, the performance of the public schools, and educational and economic outcomes in adulthood.

The states are graded using a “best-in-class” rubric, where a score of 100 points on the index would mean that a state ranked first in the nation on each and every indicator.

State scores range from 94.6 (Massachusetts, earning the only A) to 67.2 (New Mexico, with a D-plus). A closer examination of results shows that while early foundations and adult outcomes do contribute to the index, indicators related to formal education (the schooling years) are the driving force behind the state rankings.

### A National Perspective

The EPE Research Center has examined state efforts to connect the K-12 education system with early learning, higher education, and the world of work. Fourteen key transition and alignment policies are included in *Quality Counts 2009*.

The states with the most comprehensive alignment initiatives—Maryland, New Mexico, and West Virginia—have enacted at least 12 of the 14 focal policies. At the other end of the spectrum, Idaho, Kansas, and South Dakota have enacted just three such policies, and Nebraska only two.

**Definitions of School-Finance Indicators**

**Wealth Neutrality Score:** The wealth-neutrality score shows the degree to which state and local revenue are related to the property wealth of districts. A negative score means that, on average, poorer districts actually have more funding per weighted pupil than wealthy districts do. A positive score means the opposite: Wealthy districts have more funding per weighted pupil than poor districts do.

**McLoone Index:** The McLoone Index is based on the assumption that if all students in the state were lined up according to the amount their districts spent on them, perfect equity would be achieved if every district spent at least as much as that spent on the pupil in the middle of the distribution, or the median. The McLoone Index is the ratio of the total amount spent on pupils below the median to the amount that would be needed to raise all students to the median per-pupil expenditure in the state.

**Coefficient of Variation:** The coefficient of variation is a measure of the disparity in funding across school districts in a state. The value is calculated by dividing the standard deviation of adjusted spending per pupil by the state’s average spending per pupil. The standard deviation is a measure of dispersion (i.e., how spread out spending levels are across a state’s districts). If all districts in a state spent exactly the same amount per pupil, its coefficient of variation would be zero. As the coefficient gets higher, the variation in the amounts spent across districts also gets higher. As the coefficient gets lower, it indicates greater equity.

**Restricted Range:** This indicator captures the differences in funding levels found between the highest- and lowest-spending districts in a state. The index value is calculated as the difference in per-pupil spending levels at the 95th and 5th percentiles. Districts enrolling fewer than 200 students are excluded from the analysis.

**Spending Index:** The Spending Index takes into account both the proportion of students enrolled in districts with spending at the national average, and the degree to which spending is below that benchmark in districts where per-pupil expenditures fall below the national average. Each district in which the per-pupil spending figure (adjusted for student needs and cost differences) reaches or exceeds the national average receives a score of 1 times the number of students in the district. A district whose adjusted spending per pupil is below the national average receives a score equal to its per-pupil spending divided by the national average and then multiplied by the number of pupils in the district. The spending index is the sum of district scores divided by the total number of students in the state. If all districts spend above the U.S. average, the state attains a perfect index score of 100 points.

**Note:** The District of Columbia and Hawaii are single-district jurisdictions. As a result it is not possible to calculate measures of financial equity, which capture the distribution of funding across districts within a state. The District of Columbia and Hawaii do not receive grades for school finance and are not included in the rankings reported in this table.
The K-12 Achievement Index

The K-12 Achievement Index examines 18 distinct state achievement measures related to reading and math performance, high school graduation rates, and the results of Advanced Placement exams. The index assigns equal weight to current levels of performance and changes over time. It also places an emphasis on equity, by examining both poverty-based achievement gaps and progress in closing those gaps.

**GRADE** D- 45 D+
Nation Receives Passing Grade on Achievement, But Just Barely

The EPE Research Center’s K-12 Achievement Index awards states points based on three distinct aspects of student achievement: current levels of performance, improvements over time, and achievement equity between poor and nonpoor students. The nation as a whole earns 69 points, on a 100-point scale, for a grade of D-plus. The leading state, Massachusetts, earns 85 points and a B. These results suggest that no state excels across all three dimensions of achievement captured by the index. Massachusetts, for example, ranks first in the nation for current achievement levels and improvements, but 47th on equity. Despite below-average current achievement, Florida finishes seventh nationally, a result that can be attributed to very strong improvements in recent years and relatively small poverty gaps.
**STANDARDS, ASSESSMENTS, AND ACCOUNTABILITY**

### Policy Indicators

The national summary column indicates the number of states that have enacted a particular policy or, as applicable, the number of states with the specified policy enacted for all subject areas or at all grade spans.

**GRADE** C- (rank=26) C
Quality Counts 2009

This year’s 13th edition of Quality Counts investigates state policies, programs, and outcome data for English-language learners. Quality Counts 2009 also provides a 50-state update on policies and conditions in three distinct areas: chance for success, transitions and alignment, and school finance.

The State Highlights Reports present state-specific summaries of key findings across six distinct areas of policy and performance. That information is drawn from the 2008 and 2009 editions of Quality Counts. Reports for the 50 states and the District of Columbia are available on the Web at www.edweek.org/go/qc09/shr.

Indicator Sources

Quality Counts regularly tracks and grades state progress in six categories comprising more than 150 different state-by-state indicators. The 2009 installment of the report also includes a special focus on English-language learners. Many of these 50-state indicators are based on original analyses and state-survey data from the EPE Research Center. In some cases, however, the report also draws upon published information from other organizations.

The methodology section of Quality Counts provides detailed descriptions of our indicators and procedures for grading the states. That information can be accessed online at www.edweek.org/go/qc09 (2009) and www.edweek.org/go/qc08 (2008).

Between July and October of 2008, the EPE Research Center conducted an original survey of state education agencies and the District of Columbia public schools. This survey provided information for most of our state policy measures. Indicators derived from other sources are noted below.

English-Language Learners (2009)

Number of certified Title III teachers, additional teachers needed, ELL students per teacher, and types of Title III language programs provided: Consolidated State Performance Reports, U.S. Department of Education, 2006-07.

Categorical funding: EPE Research Center analysis of data from state budget documents, 2008.

Other Indicators: EPE Research Center annual state policy survey, 2008.

Chance for Success (2009)

Other Indicators: EPE Research Center analysis of data from the U.S. Census Bureau’s American Community Survey, 2007.

Transitions and Alignment (2009)

All Indicators: EPE Research Center annual state policy survey, 2008.

School Finance (2009)

Original EPE Research Center Analysis of Equity and Spending: Data for these analyses were obtained from a variety of sources, including: U.S. Census Bureau’s Public Elementary-Secondary Education Finance Data for 2006; U.S. Department of Education’s Common Core of Data 2003-04, 2005-06 (district-level data); NCES’ Comparable Wage Index 2005; U.S. Census Bureau’s Small-Area Income and Poverty Estimates 2005; U.S. Department of Education’s School District Demographics data, based on the 2000 U.S. Census; NCES, Revenues and Expenditures for Public Elementary and Secondary Education: School Year 2005-06 (Fiscal Year 2006), April 2008; and 2006 gross-state-product data from the U.S. Department of Commerce’s Bureau of Economic Analysis.

K-12 Achievement (2008)

Standards, Assessments, and Accountability (2008)

State has standards that are clear, specific, and grounded in content: American Federation of Teachers, unpublished review, October-November 2007.

Assessment item types and alignment to state standards: EPE Research Center review of testing calendars and other materials from state education agency Web sites, 2007.

State has a statewide student-identification system: Data Quality Campaign, 2007.

Other Indicators: EPE Research Center annual state policy survey, 2007.

The Teaching Profession (2008)

Teacher-Salary Parity: EPE Research Center analysis of data from the U.S. Census Bureau’s American Community Survey, 2005 and 2006.

Pay for Performance: Education Commission of the States’ Redesigned Teacher Compensation Database (fall 2006), updated by Education Week (fall 2007).

Student-Teacher Ratio: EPE Research Center analysis of U.S. Department of Education’s Common Core of Data, 2005-06.

Other Indicators: EPE Research Center annual state policy survey, 2007.
The 13th edition of *Quality Counts* explores states’ efforts to support the diverse and rapidly growing population of 5.1 million English-language learners. The report also provides a 50-state update on policies and conditions in three of the areas monitored by the report on an ongoing basis: the Chance-for-Success Index, transitions and alignment policies, and school finance.

**Highlights from this year’s report**

Challenges faced by state and local education leaders and strategies for effectively serving English-language learners or ELLs:

- Demographic profile of ELL population
- Teaching and research
- Assessment and accountability policy
- English-language acquisition and academic achievement
- Financing ELL services

EPE Research Center’s *Chance-for-Success Index*, a cradle-to-career perspective on the importance of education throughout a person’s lifetime

**State-of-the-States**—our comprehensive annual review of state policy, this year highlighting transitions and alignment policies and school finance

**Online Extras**

- **State Highlights Reports**—download individualized reports featuring state-specific findings from *Quality Counts*
- **Live online chats and a Webinar**—join leading national authorities and experts from *Education Week* and the EPE Research Center
- **Education Counts**—access hundreds of education indicators from *Quality Counts* using our exclusive online database
- **Interactive map**—explore state grades and indicators using an interactive tool that allows readers to calculate their own grades based on the indicators they feel are most important
