## GRADUATION RATE TOPS 80 PERCENT

More than 8 in 10 public high school students in the United States are graduating with a diploma. Beginning with the class of 2011, federal regulations required each state to calculate graduation rates using a method known as the Adjusted Cohort Graduation Rate (ACGR). With the exception of Idaho, all states and the District of Columbia have reported ACGR rates. Based on those state-reported data, the U.S. Department of Education indicates that the nation's graduation rate stands at 81 percent for the class of 2013.

Graduation rates for historically disadvantaged racial and ethnic groups remain substantially below those of their white and Asian peers. Nineteen percentage points, for instance, separate graduation rates for American Indian and Asian students.

NOTE: Graduation rates are calculated by states using the Adjusted Cohort Graduation Rate (ACGR) method, as reported by the U.S Department of Education. The department indicates that variation in the way that states have implemented ACGR provisions may result in potential differences in calculations across states, particularly with respect to students with disabilities. Because of methodological difference in calculations, ACGR graduation rates shown here are not comparable to data on high school exit status presented elsewhere in this report. - Data not available
>= Greater than or equal to. Results have been top coded to protect the confidentiality of individual student data
<> Data were suppressed to protect the confidentiality of individual student data.

The U.S. Department of Education's office of elementary and secondary education approved a timeline extension for Idaho to begin eporting four-year ACGR data. As a result, the four-year ACGR data for Idaho are not available for the 2012-13 school year.
2Data editing procedures were applied by the U.S. Department of Education to adjust for reporting anomalies with respect to information for Asian students.
${ }^{3}$ The United States four-year ACGRs were estimated by the U.S. Department of Education using both the reported four-year ACGR data from 49 states and the District of Columbia and using imputed data for Idaho. The estimate for American Indian students also includes imputed data for Virginia.
